

MERV 13 V-Cell (4V)

Convenience Where You Need It Most

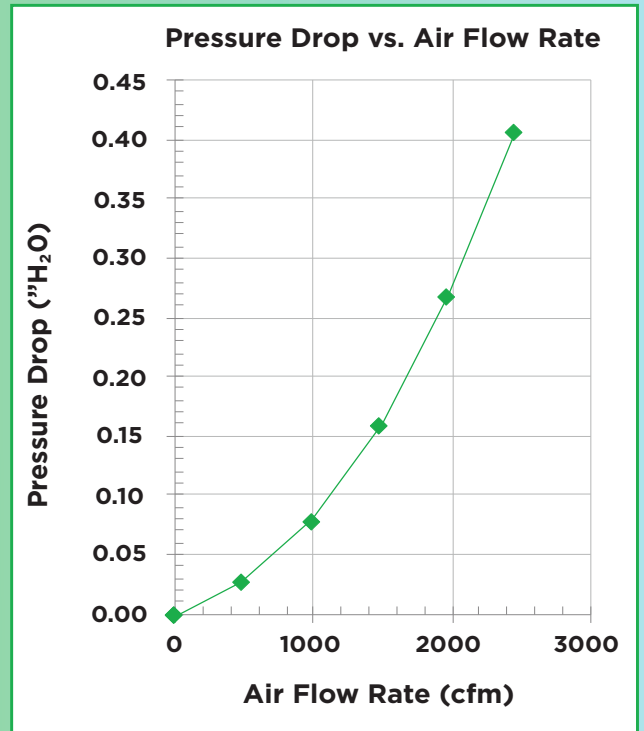

Filterbuy's V-Cell filters are made with a "V" shape design that offers better air filtration and higher dirt-holding capacity. The pleats allow for optimized airflow and particle capture without excessive resistance. Filterbuy builds every V-cell with high-quality material in the USA. The media used offers a low pressure drop, which in turn offers better energy efficiency in the building. Increased efficiency leads to lower energy costs.

Top Reasons to Choose Filterbuy Business

- Wholesale pricing from the factory
